

Wazuh → Microsoft Teams

Alert Integration Guide | Power Automate Workflows Method | 2025/2026

POWER AUTOMATE / WORKFLOWS METHOD

■ OLD METHOD IS FULLY RETIRED

Office 365 Connectors / Incoming Webhooks stopped working after December 31, 2025.

New connector creation was blocked from August 15, 2024.

You must use Power Automate Workflows (logic.azure.com) — this is the only supported method.

Overview

This guide walks through the complete setup for forwarding Wazuh security alerts to a Microsoft Teams channel using Power Automate Workflows — the only supported method as of 2025.

Wazuh Alert

custom-teams.py

Power Automate Webhook

Teams Channel

Requirements

Component	Requirement
Wazuh Manager	Version 4.0 or higher
Python	3.8+ (usually included with Wazuh)
Network	HTTPS access to logic.azure.com (Power Automate)
Microsoft Teams	Channel creation permissions
Power Automate	Free tier (included in most Microsoft 365 plans)

Installation Steps

1 Download Integration Files

On your Wazuh Manager, download the two integration scripts:

```
cd /tmp
wget https://raw.githubusercontent.com/jayzielinski/wazuh-teams-workflows/main/custom-teams
wget https://raw.githubusercontent.com/jayzielinski/wazuh-teams-workflows/main/custom-teams.py
```

BASH

2 Install Scripts & Set Permissions

Copy to the Wazuh integrations directory and apply correct ownership and permissions:

```
# Copy files
sudo cp custom-teams /var/ossec/integrations/
sudo cp custom-teams.py /var/ossec/integrations/

# Set ownership
sudo chown root:wazuh /var/ossec/integrations/custom-teams
sudo chown root:wazuh /var/ossec/integrations/custom-teams.py

# Set permissions
sudo chmod 750 /var/ossec/integrations/custom-teams
sudo chmod 750 /var/ossec/integrations/custom-teams.py

# Verify
ls -la /var/ossec/integrations/
```

BASH

Expected output:

```
-rwxr-x--- 1 root wazuh 444 ... custom-teams
-rwxr-x--- 1 root wazuh 7274 ... custom-teams.py
```

3 Update the Dashboard URL in custom-teams.py

Open the script and replace your `.wazuh.dashboard.ip` with your actual Wazuh Dashboard IP or hostname:

```
sudo nano /var/ossec/integrations/custom-teams.py
```

BASH

Find the actions section inside `_make_card()` and update the URL:

```
"url": "https://192.168.1.100/app/threat-hunting#/overview/
?tab=general&tabView=events&agentId={agent.get('id','')}"
```

PYTHON

4 Create Power Automate Workflow in Microsoft Teams

Follow these steps inside Microsoft Teams:

#	Action
---	--------

1	Open Microsoft Teams and navigate to the channel that will receive alerts.
2	Click the three dots (...) next to the channel name.
3	Select "Workflows" from the dropdown menu.
4	Click "Send webhook alerts to a channel".
5	Wait for "Valid connection" status, name your workflow, then click Next.
6	Select your Team and Channel, then click Add workflow.
7	Copy the generated webhook URL (starts with https://prod-XX...logic.azure.com).
8	Click "Done" and save the URL — you'll need it in the next step.

The webhook URL format: https://prod-XX.northeurope.logic.azure.com:443/workflows/...

5

Configure ossec.conf

Edit the Wazuh configuration file and add one or both integration blocks:

```
sudo nano /var/ossec/etc/ossec.conf
```

BASH

Basic — all alerts level 10 and above:

```
<integration>
  <name>custom-teams</name>
  <hook_url>YOUR_TEAMS_WEBHOOK_URL_HERE</hook_url>
  <level>10</level>
  <alert_format>json</alert_format>
</integration>
```

XML

Advanced — specific rule IDs + all level 10+ alerts:

```
<!-- Specific security rules -->
<integration>
  <name>custom-teams</name>
  <hook_url>YOUR_TEAMS_WEBHOOK_URL_HERE</hook_url>
  <rule_id>5710,5712,5902,5404,60204,60109</rule_id>
  <alert_format>json</alert_format>
</integration>

<!-- All critical alerts (level 10+) -->
<integration>
  <name>custom-teams</name>
  <hook_url>YOUR_TEAMS_WEBHOOK_URL_HERE</hook_url>
  <level>10</level>
  <alert_format>json</alert_format>
</integration>
```

XML

6

Restart Wazuh Manager

```
sudo systemctl restart wazuh-manager
```

BASH

7

Test the Integration

Trigger a test alert by adding a user on a monitored Linux agent:

```
sudo useradd testuser123
```

BASH

Monitor the integration log on the Wazuh Manager:

```
sudo tail -f /var/ossec/logs/integrations.log
```

BASH

```
# Expected success output:  
# 2025-07-28 19:30:00 INFO Sent ok (status 202)
```

What Each Teams Alert Includes

Field	Description
Level	Severity number with color coding (green/amber/red)
Rule ID	Wazuh rule identifier
Description	Human-readable rule description
Agent	Agent name that generated the alert
Timestamp	Alert time in local timezone
Full Log	Complete raw log entry
Dashboard Link	Direct link to Wazuh Threat Hunting view for that agent

Common Rule IDs to Monitor

Rule ID	OS	Description
5710	Linux	SSH login with non-existent user
5712	Linux	SSH brute-force attack
5902	Linux	New user added
5404	Linux	Three failed sudo attempts
60204	Windows	RDP brute-force attack

60109	Windows	New Windows user account created
-------	---------	----------------------------------

Troubleshooting

Symptom	Likely Cause	Fix
No messages in Teams	Wrong webhook URL	Re-copy URL from Power Automate
status 202 in log but no message	Workflow misconfigured	Check channel selection in Power Automate
Permission error on startup	Wrong file permissions	chmod 750 & chown root:wazuh
integratord not running	Config syntax error	Run: /var/ossec/bin/wazuh-integratord -t
Webhook returns 400	Outdated connector URL	Create a new Power Automate workflow
